

How To Play

How To Operate The Menu Screen, Etc.

Keyboard

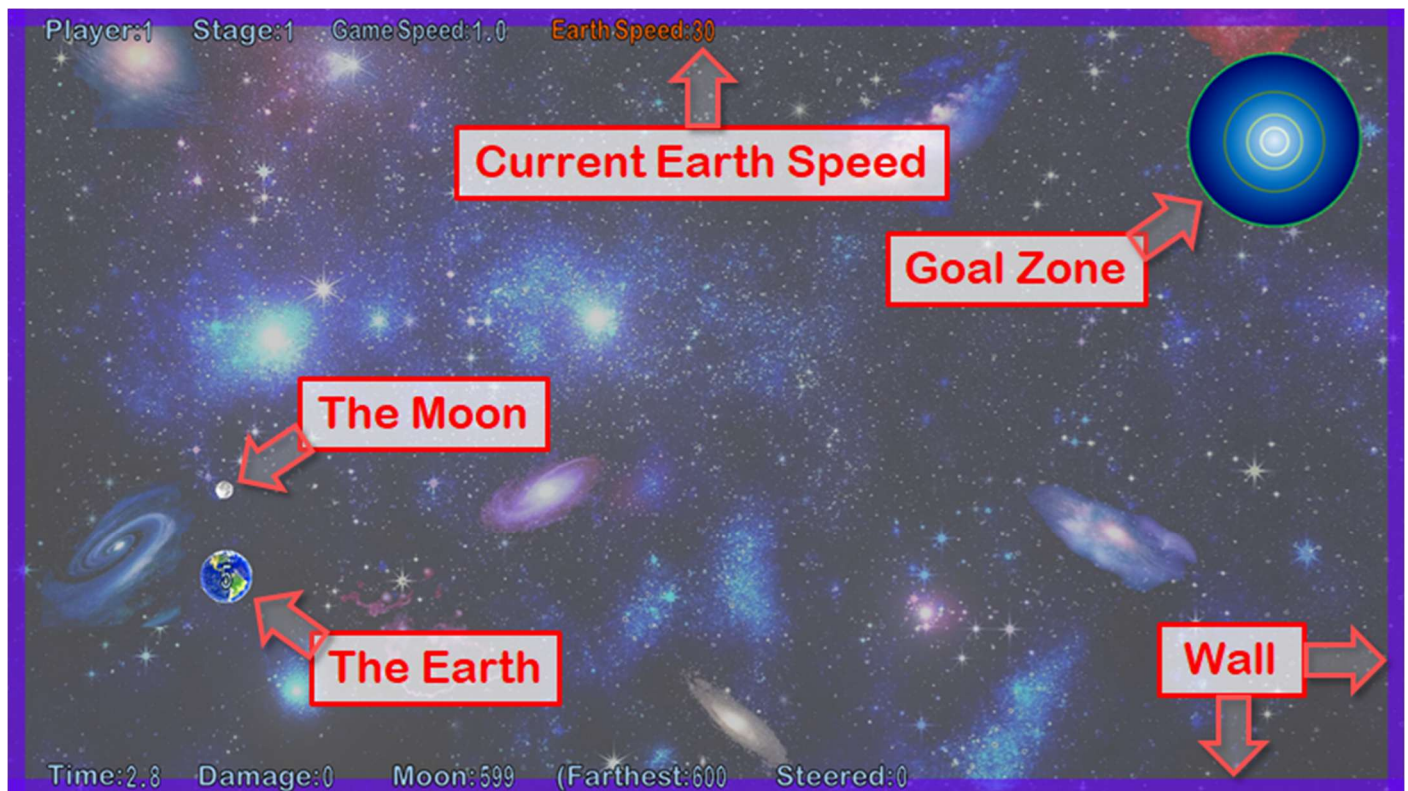

[↑][↓] [←][→]	Enter or Space
Moving the cursor	Confirm

Game Controller

Left stick or Directional pad	[A] or [START]
Moving the cursor	Confirm

(Buttons on the menu screen, etc. can also be pressed with the left mouse button.)

Game Screen Explanation

How To Operate On The Game Screen

Keyboard

[↑][↓] [←][→]	[F]	[D]	Enter or Space
Steer the Earth	The Earth speed up	The Earth slow down	Pause

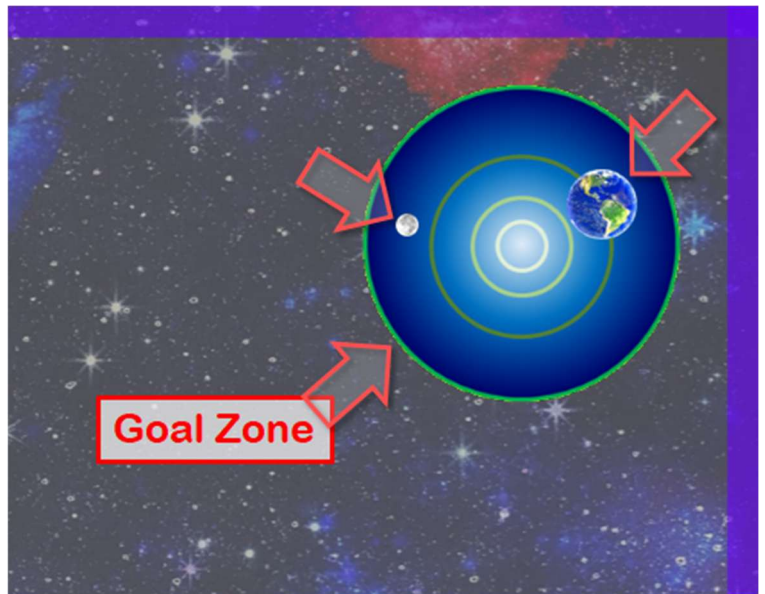

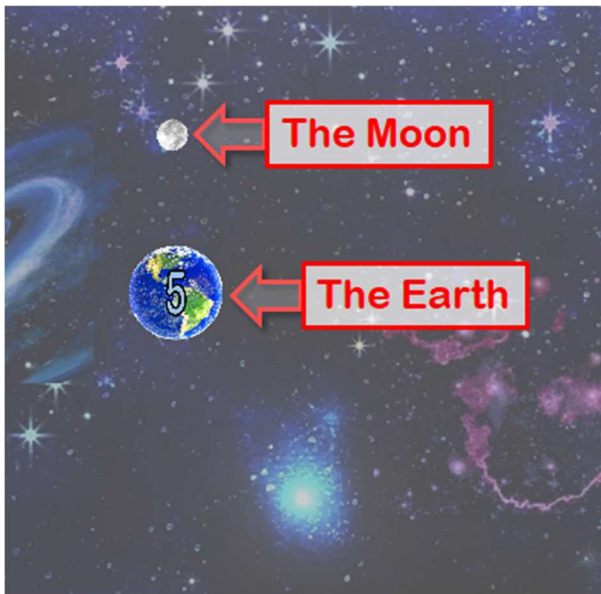

Game Controller

Left stick or Directional pad	[X]	[Y]	[A] or [START]
Steer the Earth	The Earth speed up	The Earth slow down	Pause

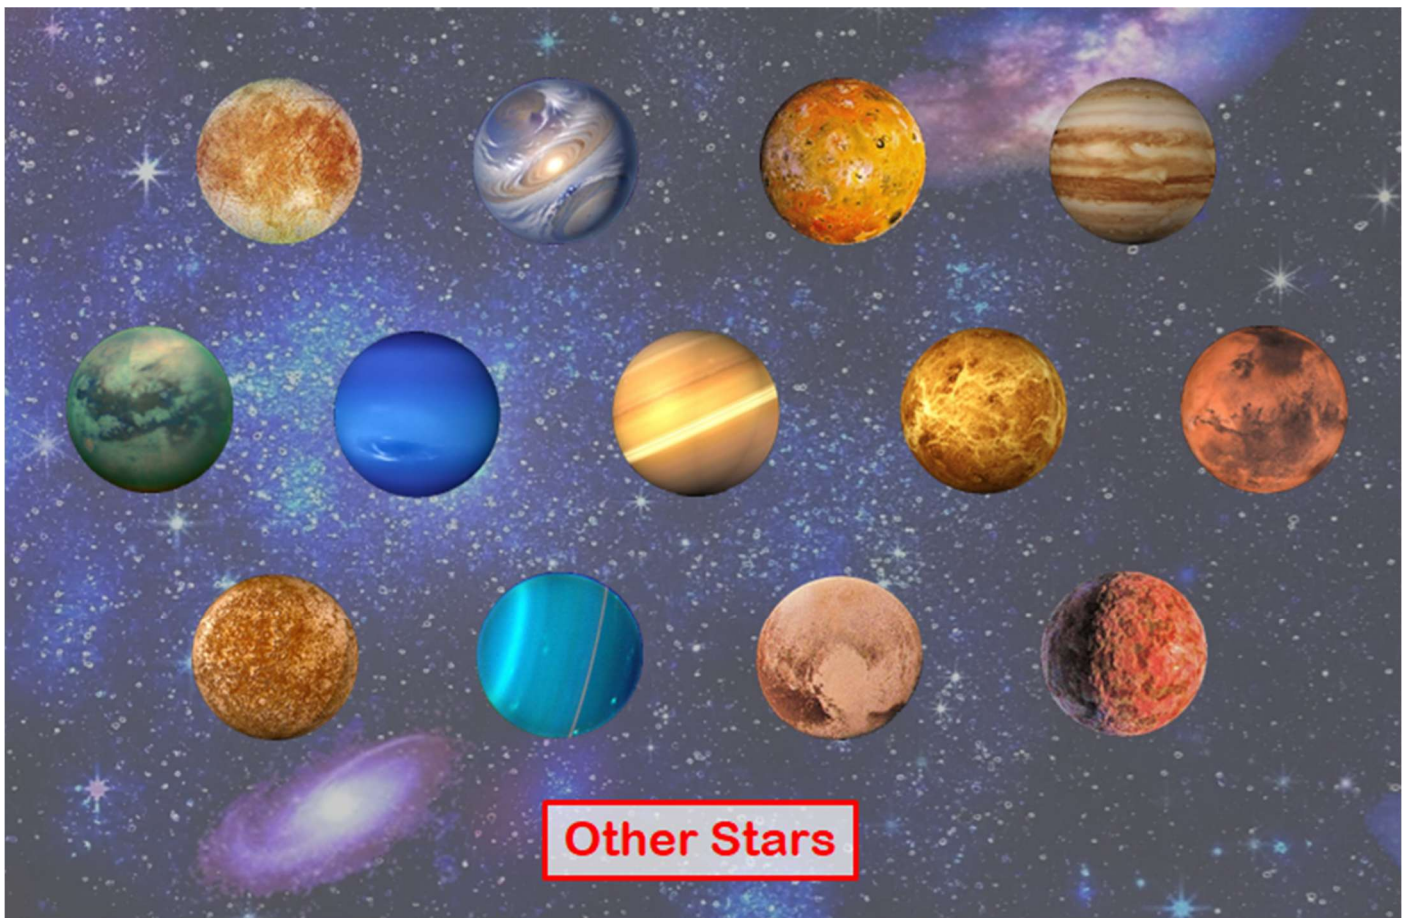

I think using the left stick on a game controller allows you to control the Earth most freely and has the most fun.

Aim For The Goal Together With The Moon

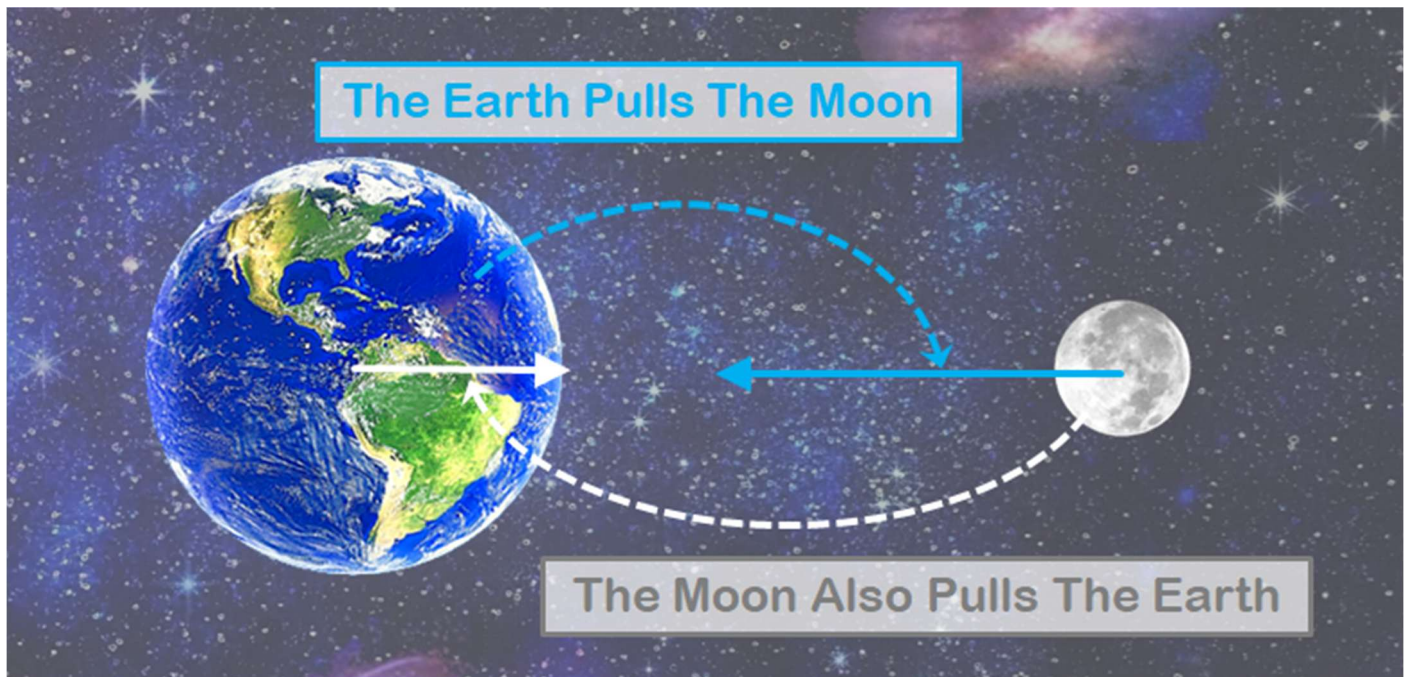

When both the Earth and the Moon are in the goal zone, the stage is cleared.

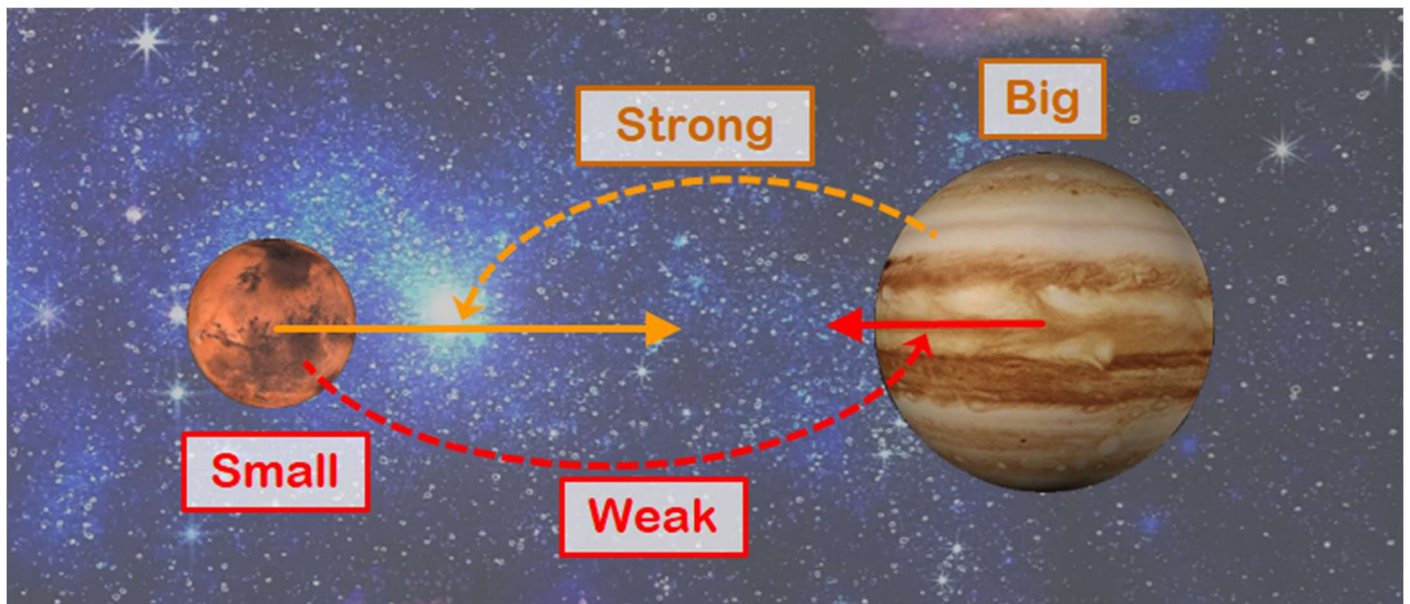

Depending on the stage, there will be other stars.

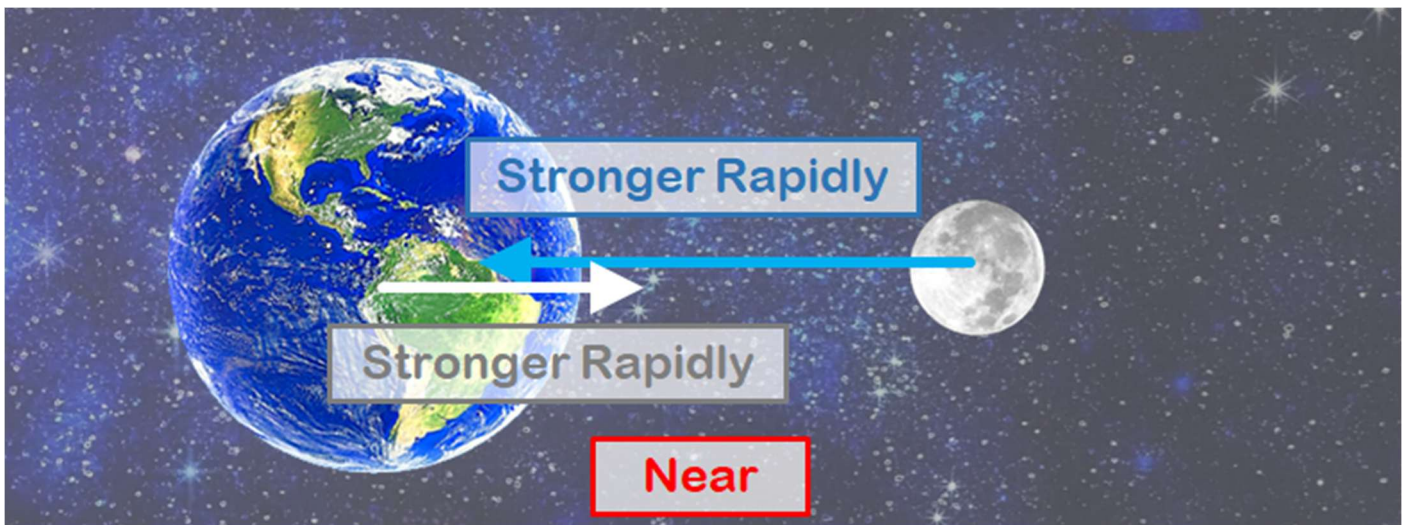

The Earth, the Moon, and other stars, have universal gravitation. You can't steer the Moon, but you can use the Earth's gravitational force to pull on the Moon.

The larger the star, the stronger the gravitational force. (The bigger the star, the stronger the pull it has on other stars)

The strength of gravity is inversely proportional to the square of the distance to the star. In other words, if the distance is reduced by one third, the gravitational effect will be nine times greater. (As the distance gets closer, the effect of gravity becomes stronger rapidly.)

The Earth Damage

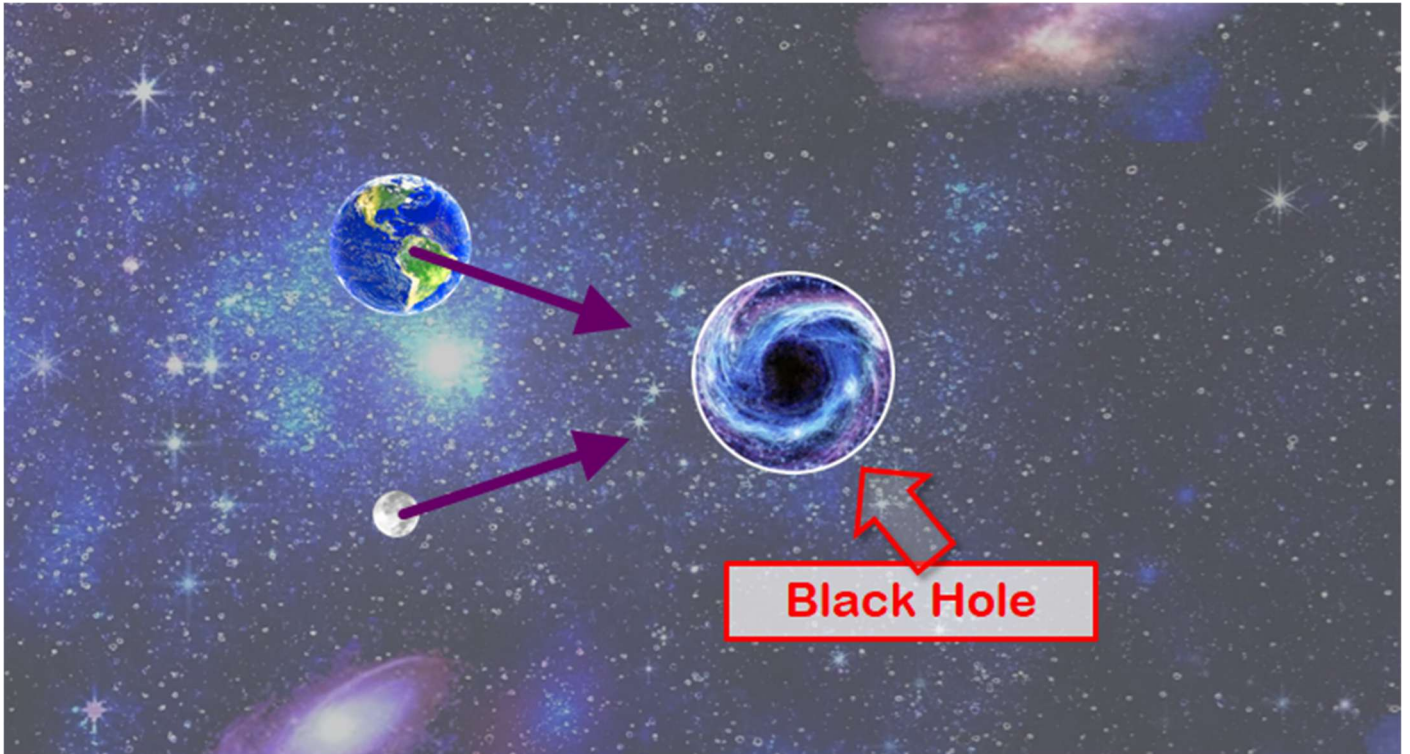

When the Earth collide with the Moon or other stars, The Earth will be damaged. When the Earth's number reaches 0 and the Earth is damaged, the Earth will break and you will fail to clear the stage.

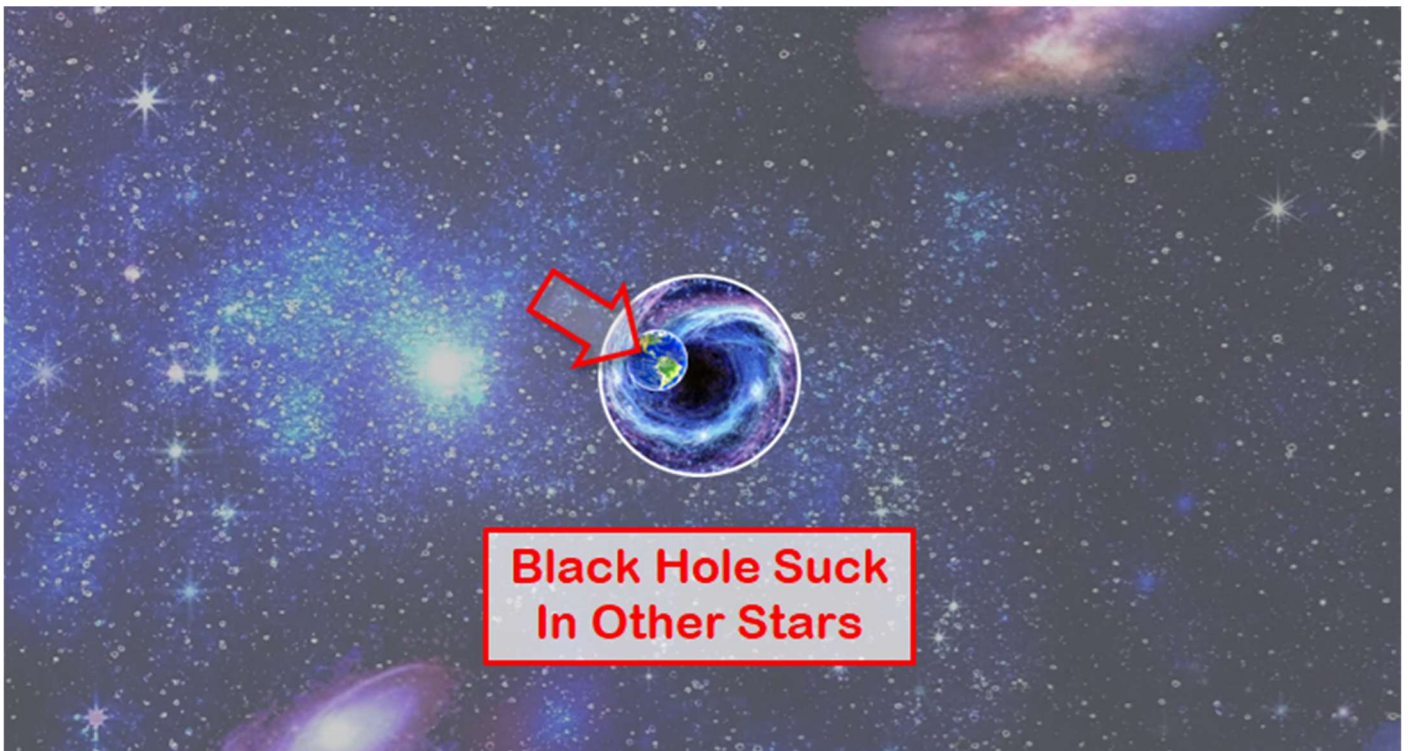

Black Hole

Depending on the stage, there will be a black hole.

The gravity of a black hole also pulls on the Earth and the Moon and other stars.

A black hole suck in the Earth and the Moon and other stars.

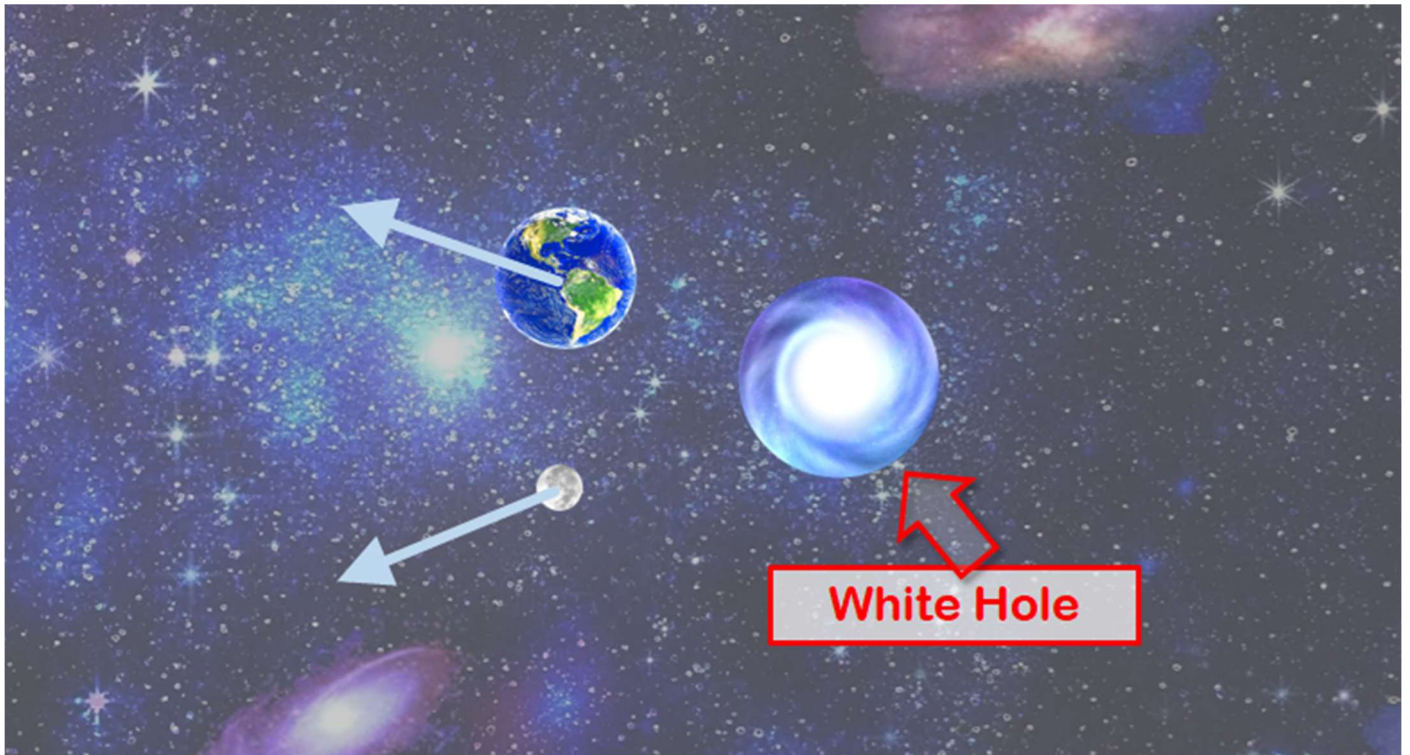

When a black hole sucks in the Earth or the Moon, you will fail to clear the stage.

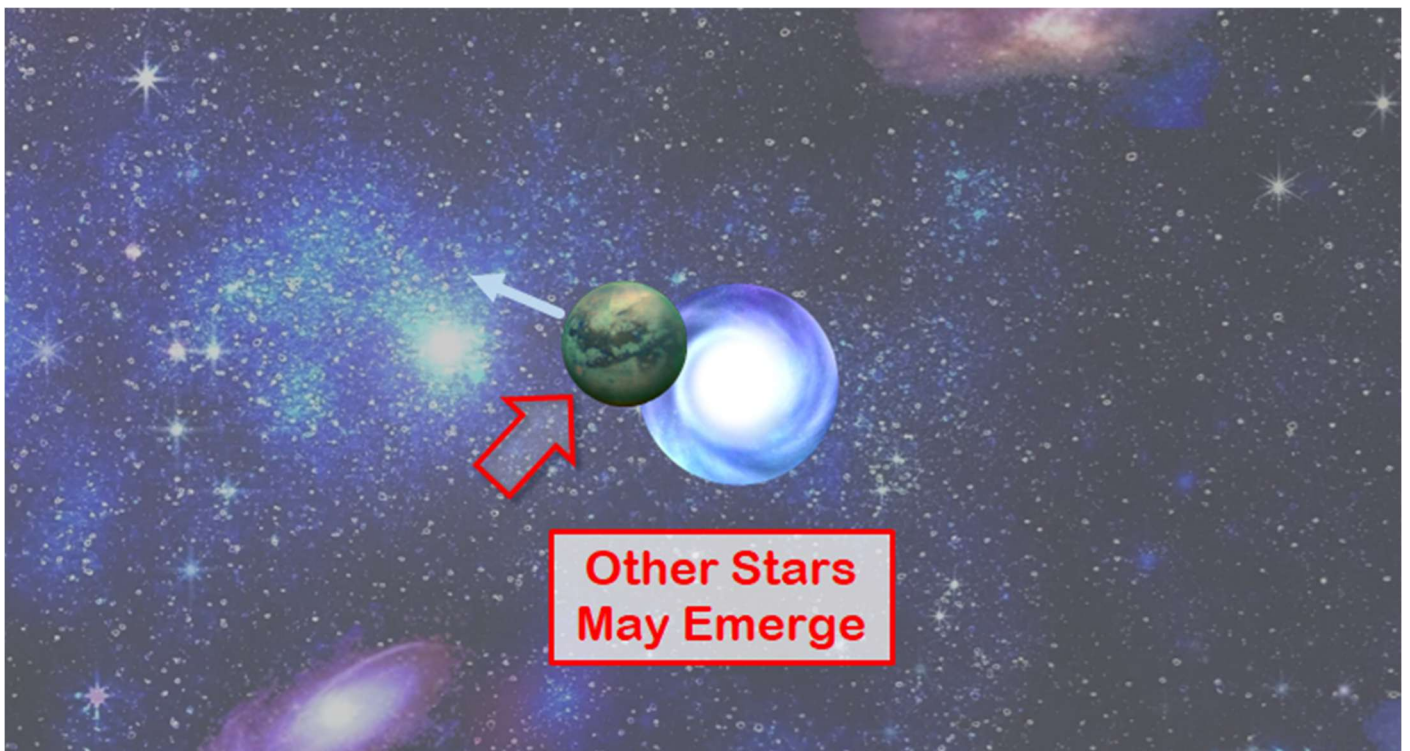

White Hole

Depending on the stage, there will be a white hole.

A white hole has a repulsive force that repels the Earth and the Moon and other stars.

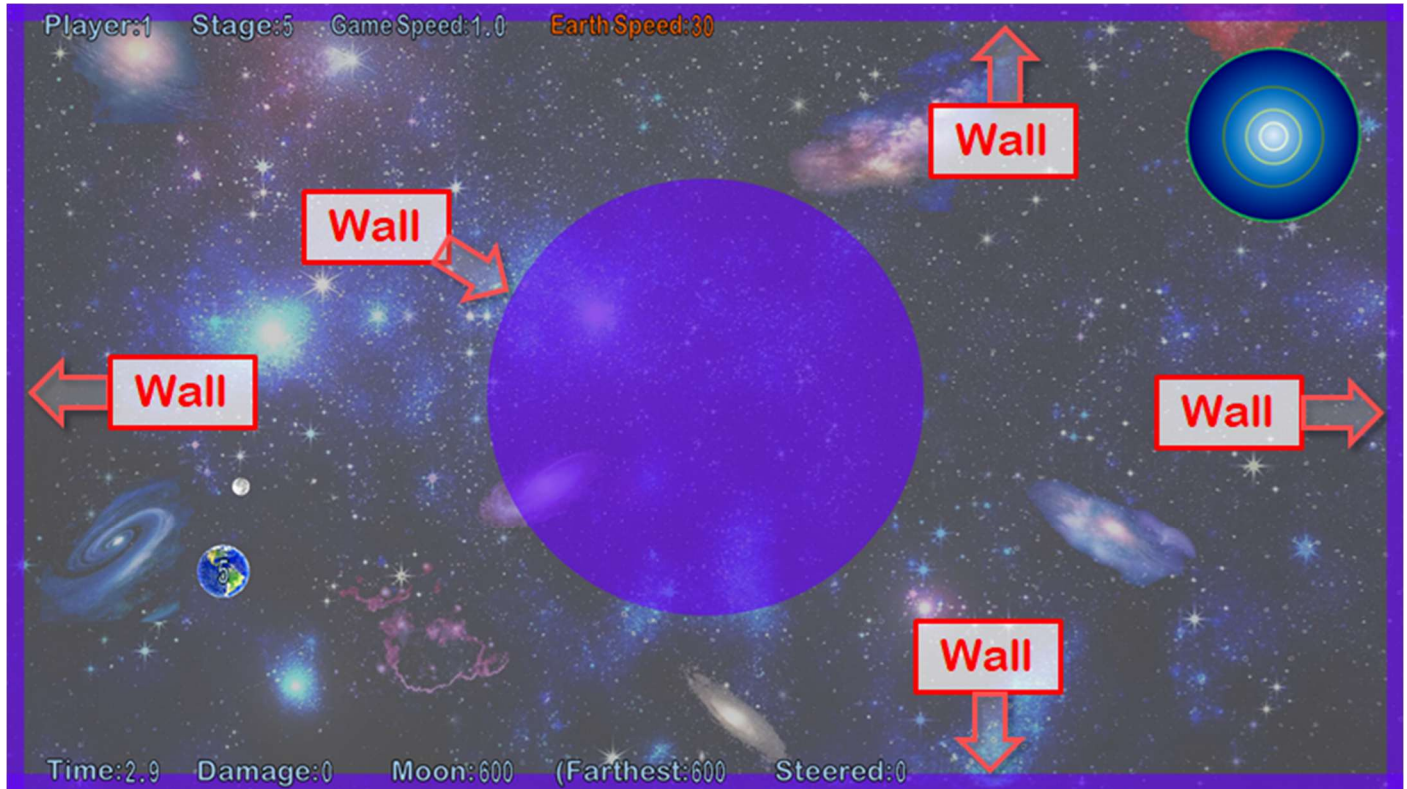

Other stars may emerge from the white hole at regular intervals.

Wall

In this game's universe, walls exist.

The Earth and the Moon and other stars can't go through walls, but their gravity reaches beyond the wall.
